

SITE GUARDIAN

Your Internet presence and connection to the Internet is under constant attack by random attackers, if you could provide the equivalent of a 'Do Not Enter' sign, would you?

Sûnnet Beskerming has your needs covered, with the Site Guardian Service - essential information about the threats that affect the technology and platforms used to create and deliver your Internet presence.

BESKERMING**

BUILDING ON BEDROCK

Do you know the exact threats and vulnerabilities in your website platform and software? What about the vulnerabilities present in the code of the site, itself?

Guarding and watching over your site, *Site Guardian* provides you with the latest information about known and emerging vulnerabilities that affect your site's software, along with details on how to update / manage them.

SECURITY PATROLS

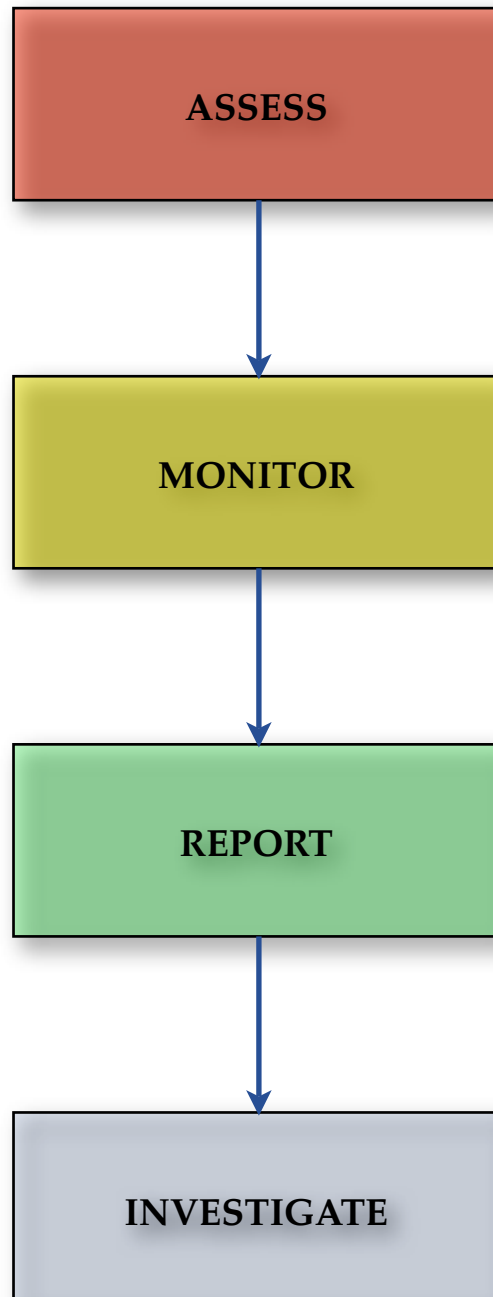

Watching over your site, 'Site Guardian' rapidly reacts when a visible breach is reported (with added services, it can report when breach attempts begin), responding within 12 hours of attack. Most attacks are discovered and reported within 3-4 hours. It may not even be your site which was originally attacked - it could have been collateral damage.

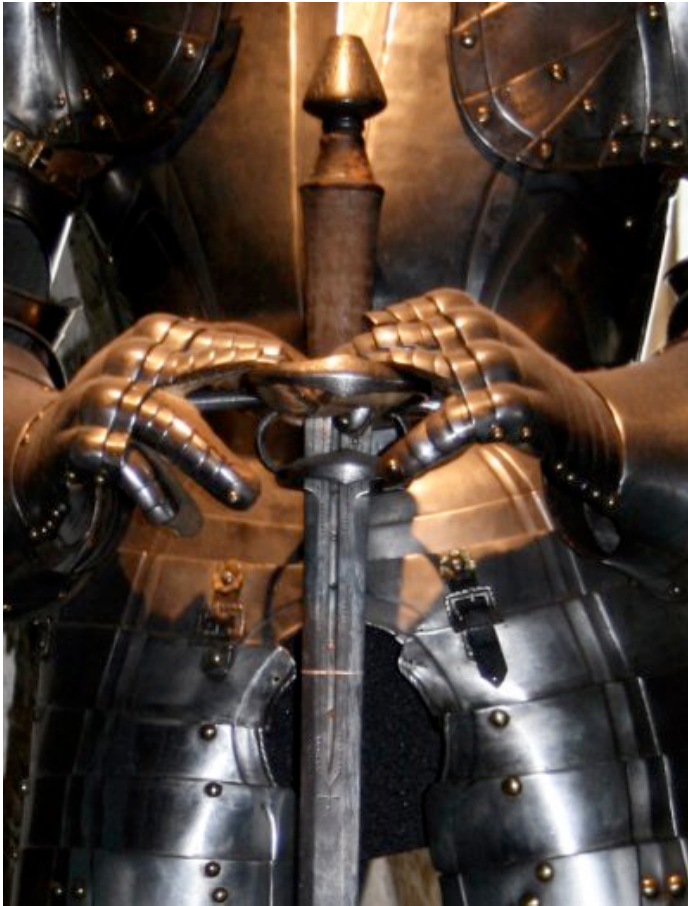

FIRST RESPONSE

Sûnnet Beskerming's response to a detected attack is, in many cases, faster than internal response teams, providing rapid and accurate news and details of the facts behind the attack.

One of the worst events that could happen to a modern business is to suffer a major attack against their online presence. For many companies, protecting their website against attack, properly identifying and classifying attacks, and managing the recovery from an attack is something of a black art. Even for companies with dedicated security personnel, the process is still sometimes a mystery.

Following recovery of normal operations, Sûnnet Beskerming's 'Site Guardian' will provide a detailed analysis of how the attack took place, who was likely to have carried out the attack, and any other pertinent details, such as possible data theft.

REAL PEDIGREE

A new product, with a pure bloodline.

Sûnnet Beskerming's Site Guardian Service draws on the experience and unmatched ability of the Information Security researchers at Sûnnet Beskerming.

The ability of company researchers to identify, analyse, track, and report on Information threats ahead of the industry has been proven time and time again over the years.

That ability is now being made available in a format that lets you gain a competitive advantage over attackers and your competitors, with information pertinent to the threats facing the systems and data stores that go together to create your Internet presence

If you store or work on sensitive personal or financial data, you need Sûnnet Beskerming services to protect what is important to you and your clients.

Unless you have teams of people dedicated to researching new threats, you aren't going to catch them all before they hit you. Sûnnet Beskerming services allow your experts to make informed, rapid and accurate decisions.

Major companies and institutions that already have other Security services, such as NASA, major international banks, insurance companies, and top Information Security companies benefit from Sûnnet Beskerming services, and so can you.

Contact us today to get started with Information Security protection, the Sûnnet Beskerming way.

SITE GUARDIAN SERVICE

Be informed about the threat before it affects you. Know what the hackers are going to target on your website, before they do. Sûnnet Beskerming Site Guardian provides you that knowledge, at a price you can afford.
