

## **SECURITY PATCH BRIEFINGS**

What has that security patch just done to your system? Why didn't anyone tell you that the patch would break things? Why does your system seem so fragile?

Sûnnet Beskerming has your needs covered, with the Security Patch Briefing Service - essential information about the threats that have been patched on your system, and exactly what else the patches have done.

**SÛNNET  
BESKERMING**

## WHAT'S IN A PATCH?

Unfortunately for many users, they are not aware of what exactly is inside the patches being provided by their software vendors, exactly how important it is to apply them, and what issues they might expect to face when they apply them (including loss of critical data).

Sûnnet Beskerming has the solution. With every security patch suite release by the major Operating System vendors, you will receive a clearly written guide to exactly what each patch is fixing, whether it is replacing any previous patch, workarounds in case you can't install the patch right now, and any issues that are known to affect the patch (such as attacks by hackers).

Accompanying this handout is a brief that can be delivered to non-technical management and staff, covering the key highlights for each patch and what you should expect to face when installing it.

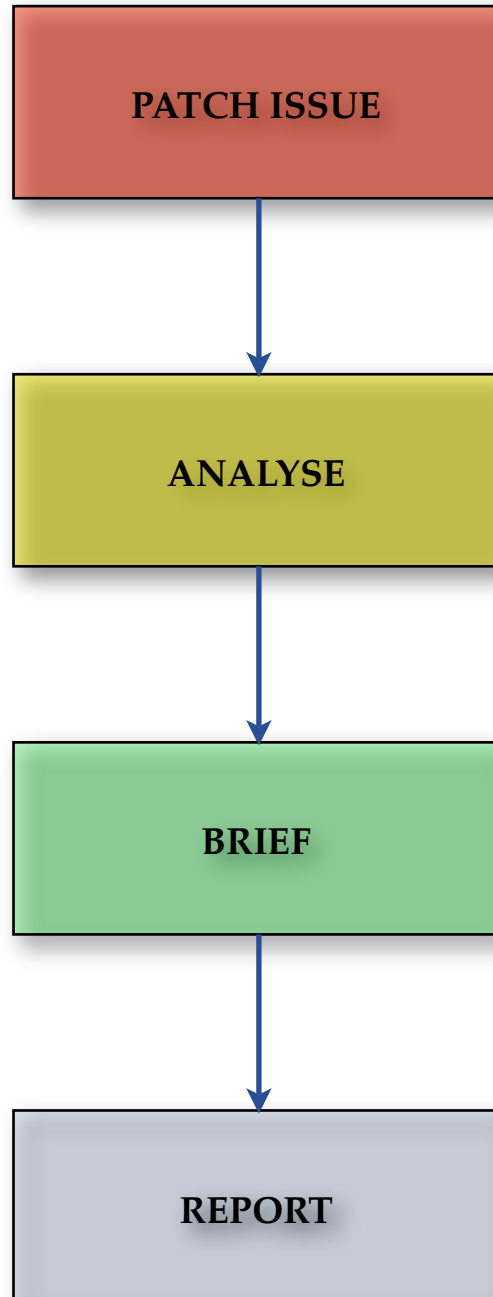

## SOMETHING FOR ALL

Sûnnet Beskerming Advisory Service provides you with timely, relevant, and accurate information about the real nature of what it is you are facing.

This critical knowledge helps you create your own, easily read knowledge base that can aid in determining patch rollout for businesses and government agencies, and help end users understand just what is happening to their systems when the patches are automatically install.

With the right people, and the right blend of Sûnnet Beskerming services, you can avoid the problems at patch time, while still staying protected. Sûnnet Beskerming gives you what you need:

- Know what the problem is.
- Know how to fix it.
- Know how to defend it.

## REAL PEDIGREE

*A new product, with a pure bloodline.*

Sûnnet Beskerming's Security Patch Briefing Service draws on the experience and unmatched ability of the Information Security researchers at Sûnnet Beskerming.

The ability of company researchers to identify, analyse, track, and report on Information threats ahead of the industry has been proven time and time again over the years.

That ability is now being made available in a format that lets you gain a competitive advantage over attackers and your competitors, with information pertinent to just what it is that the patches installed on your systems are doing.

If you store or work on sensitive personal or financial data, you need Sûnnet Beskerming services to protect what is important to you and your clients.

Unless you have teams of people dedicated to researching new threats, you aren't going to catch them all before they hit you. Sûnnet Beskerming services allow your experts to make informed, rapid and accurate decisions.

Major companies and institutions that already have other Security services, such as NASA, major international banks, insurance companies, and top Information Security companies benefit from Sûnnet Beskerming services, and so can you.

Contact us today to get started with Information Security protection, the Sûnnet Beskerming way.

### SECURITY PATCH BRIEFING SERVICE

Do you know exactly what that patch that has been installed is doing, and why your equipment stopped working? Sûnnet Beskerming Security Patch Briefing Service provides you that knowledge, at a price you can afford.

**Delivery Method** : Email  
**Priced from** : \$50.00 p.a. (ex. GST)
