A Guardian Angel

One of the worst events that could happen to a modern business is to suffer a major attack against their online presence. For many companies, protecting their website against attack, properly identifying and classifying attacks, and managing the recovery from an attack is something of a black art. Even for companies with dedicated security personnel, the process is still sometimes a mystery.

Sûnnet Beskerming **changes that with their 'Site Guardian' service.**

Guarding and watching over your site, 'Site Guardian' provides you with the latest information about known and emerging vulnerabilities that affect your site's software, along with details on how to update / manage them. Watching over your site, 'Site Guardian' rapidly reacts when a visible breach is reported (with added services, it can report when breach attempts begin), responding within 12 hours of attack. Most attacks are discovered and reported within 3-4 hours. It may not even be your site which was originally attacked - it could have been collateral damage.

	WITHOUT SITE GUARDIAN	WITH SITE GUARDIAN
Normal Operation	Site operates normally - client data remains secure.	
Under Attack	Attacker attempts to gain unauthorised access to site(s), leaving damage trail.	
Immediately Post-Attack	Nothing. Attacker continues to cause damage	Notification within 12 hours of initial attack, along with guidance to prevent re-attack.
2-4 Weeks Post-Attack	Successful attack draws more attackers, seeking more sensitive and valuable data	Forensics report completed. Initial attack draws additional attackers, but unsuccessful due to guidance supplied by Sûnnet Beskerming
Ongoing Operation	Continual leakage of sensitive client data, resulting in losses for clients and loss of business	Ongoing updates and security advice fend off attack attempts, leaving data secure.

Following recovery of normal operations, *Sûnnet Beskerming's* 'Site Guardian' will provide a detailed analysis of how the attack took place, who was likely to have carried out the attack, and any other pertinent details, such as possible data theft.

About Us

Based out of Adelaide, Australia, *Sûnnet Beskerming* has been delivering world-class Information Security and content to clients across the globe since 2004.

Reaching more than 400 million people, through those responsible for their Information and Financial Security, *Sûnnet Beskerming* services and products are used by military R&D bodies, major banks, State and National security agencies, ISPs, and many more.

Solutions can be tailored from the individual through to the mega-corporate, and still feel personal.
